Mundlak specification test
H0: Covariates are uncorrelated with unobserved panel-level effects

chi2(**25**) = **7374.43**
Prob > chi2 = **0.0000**

Notes: Fixed effects and correlated random effects are
consistent under H0 and Ha.
Random effects are efficient under H0.
Click to Open File: REtest_1.doc

Breusch and Pagan Lagrangian multiplier test for random effects

sphus[id,t] = Xb + u[id] + e[id,t]

Estimated results:

	Var	SD = sqrt(Var)
sphus	1.060887	1.029994
e	.4110816	.6411565
u	.1926288	.438895

Test: Var(u) = 0
chibar2(01) = **15517.97**
Prob > chibar2 = **0.0000**

Note: the rank of the differenced variance matrix (**24**) does not equal the number of coefficients being tested (**25**); be sure this is what you expect, or there may be problems computing the test. Examine the output of your estimators for anything unexpected and possibly consider scaling your variables so that the coefficients are on a similar scale.
